

- ① With fixed nodes and edges connectivity
- ② dam - itself - tool - needs to call

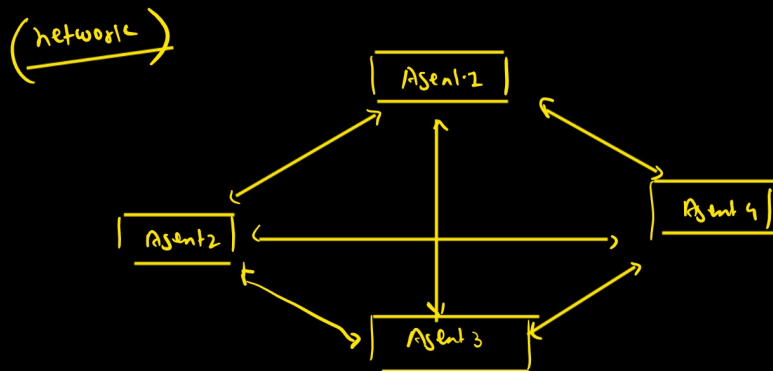

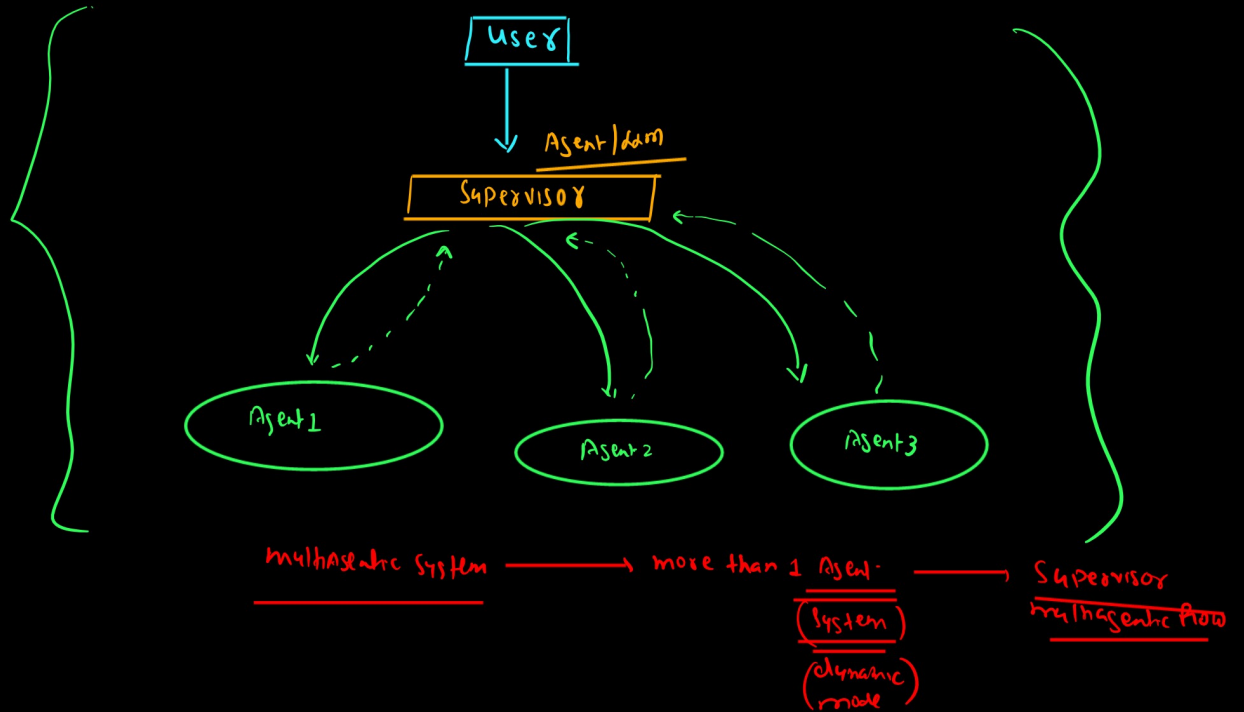

multiagent flow → more than one agent

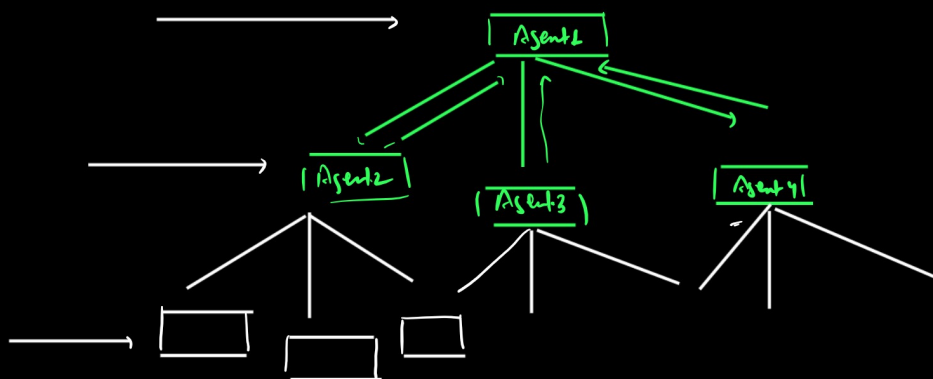

- {
 1 network ✓
2 Supervisory ✓
3 hierarchical ✓
 }

{ Any single agent -
 Any multi agent -

→ Deep Agent

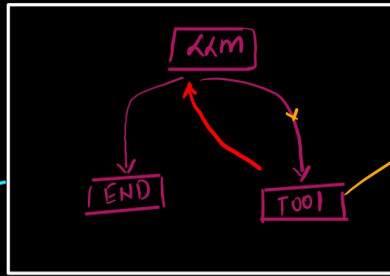

Hierarchical flow

Autonomy
LLM with tool calling
Dynamic basis

Re. Act

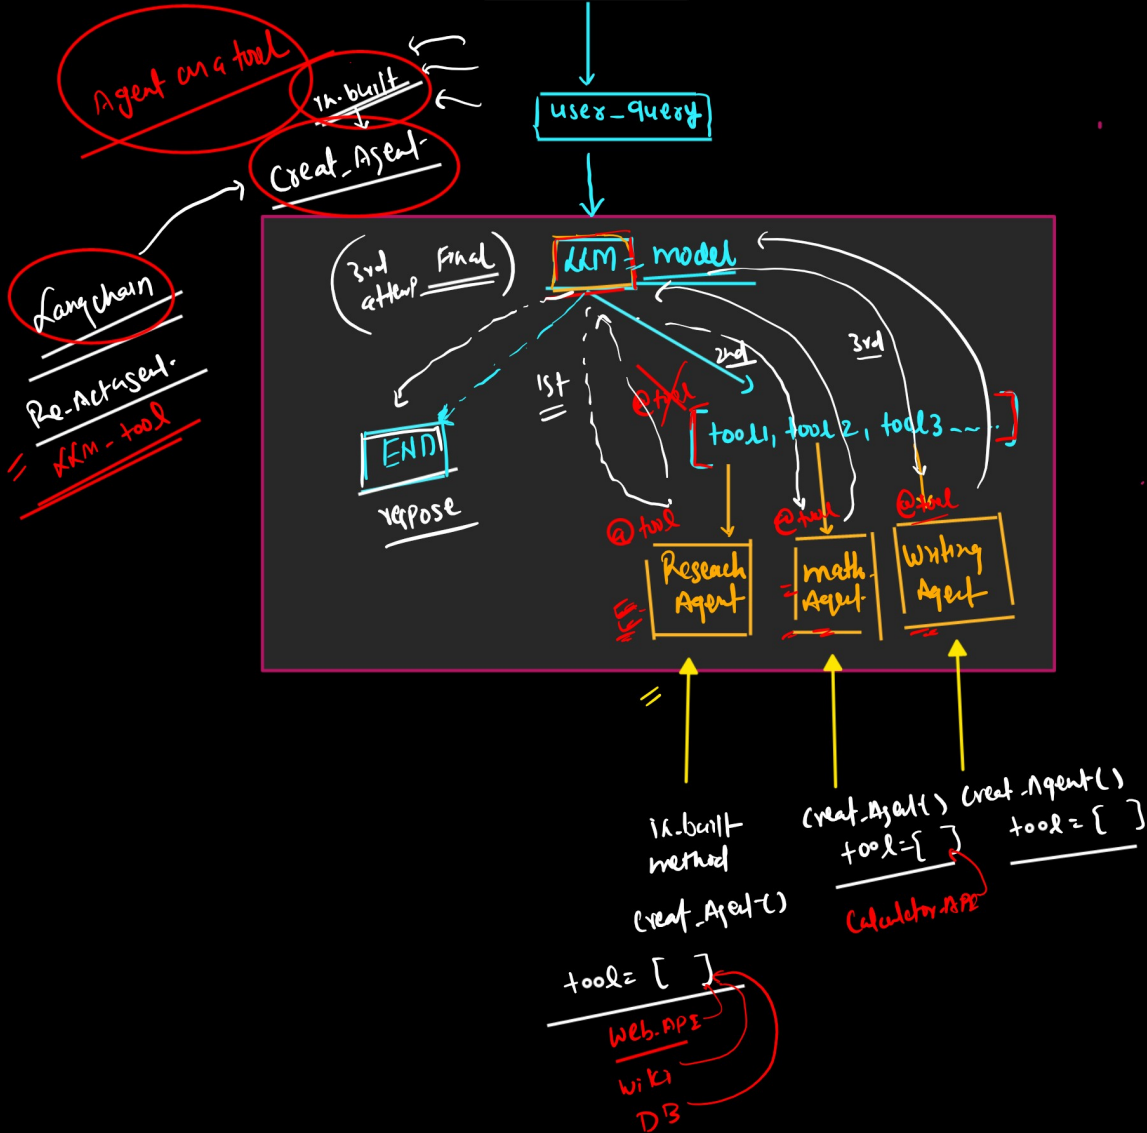

Reasoning - Action

(multiple tool)
Which tool needs to be call

from langchain.agents import create_agent

"Explain RAG briefly, calculate 25 * 16, and present the answer in a clean professional format."

```

main_delegation_agent = create_agent(
    model=model, LLM
    tools=[
        ask_research_agent, Read - tool_call [ ]
        ask_math_agent, Read - tool_call [ ]
        ask_writing_agent, Read - tool_call [ ]
    ],
    system_prompt="""
You are the main coordinator.

```

You have three specialist subagents:

1. Research specialist
2. Math specialist
3. Writing specialist

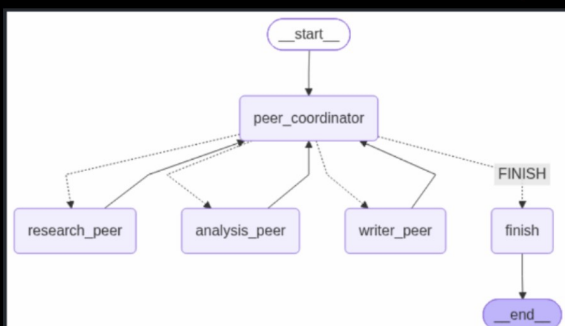

Delegate work to the appropriate specialist tools.
 You may call multiple specialists when necessary.
 Finally provide one clear answer to the user.

```

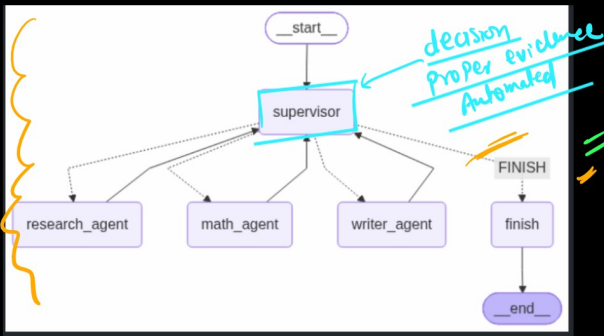

""",
    name="main_coordinator",
)

```

Commaid

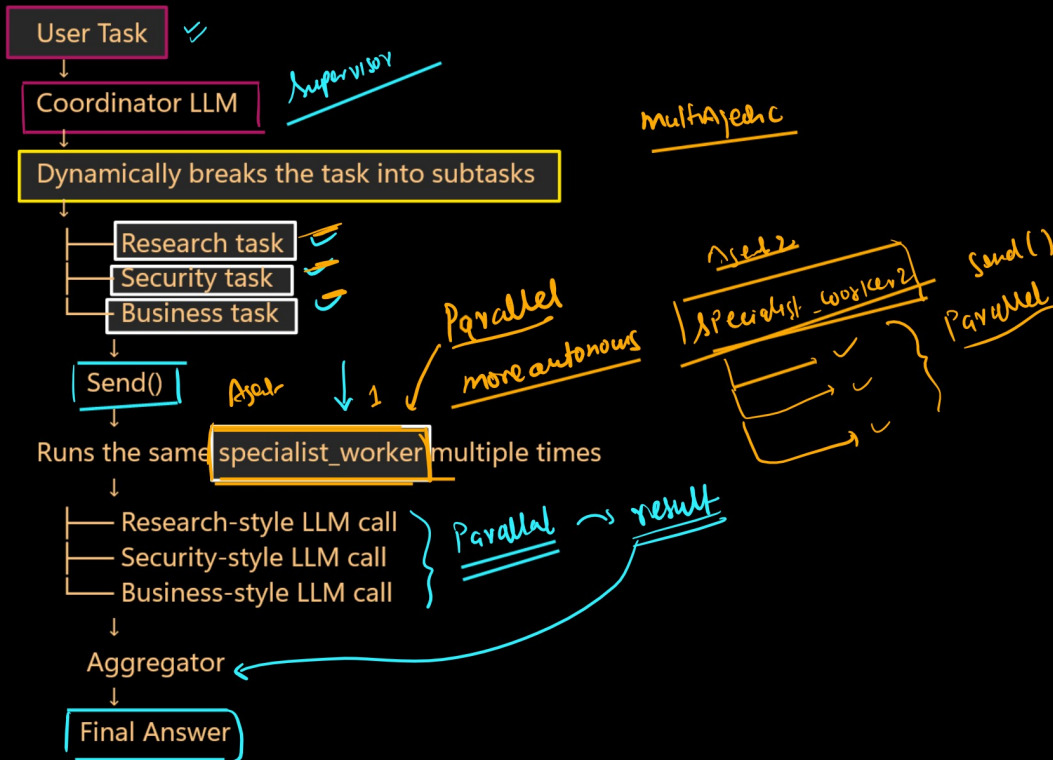

2-3 week (5-6)

1-m.
MCP/A2A → 2

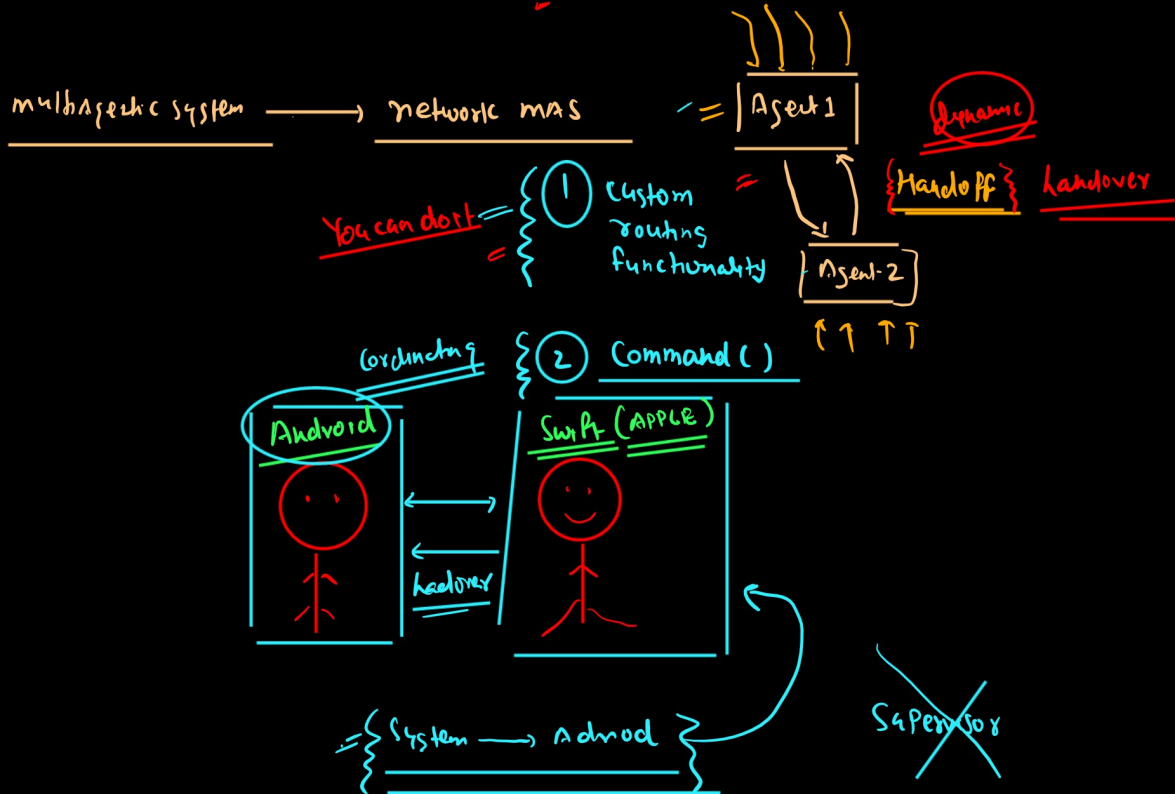

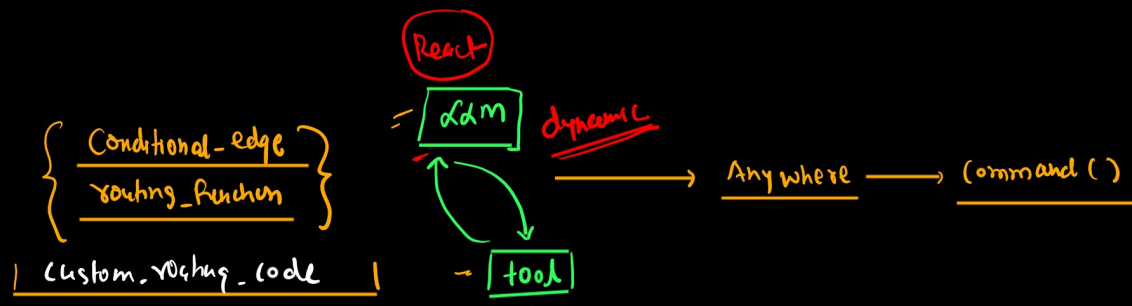

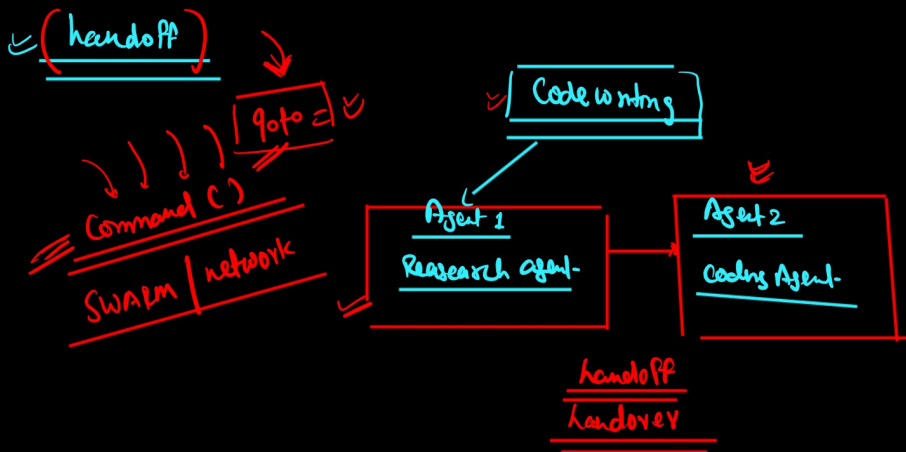

Langchain()
Diff-agentchain
interview
ADP OpenAI

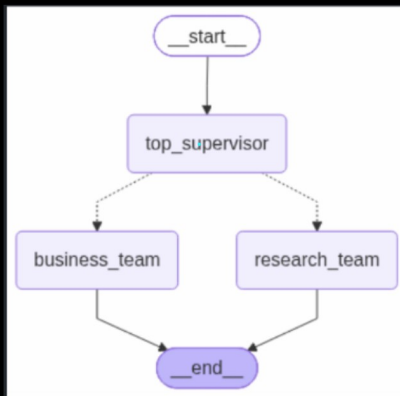

✓ Langchain → with all new methods Async Celery
✓ CREWAI vs Autogen vs ADIC vs openAI ADIC ← notebook

mp/A2A / evaluation / guardrails

Command() → not a mandatory fn
but let's understand the use of it

Hierarchical FLOW ✓

Supervisor FLOW ✓

Complete Agentic FLOW ✗

Complete deterministic FLOW ✗

hybrid FLOW (somewhat deterministic & dynamic can)

LLM enable workflow

Supervisor

Subset of hierarchical flow

≡ LLM enable workflow
 - more reliable & deterministic
Partial Agentic flow

Enterprise / use facing (complete autonomous)
